

AMA Guides & California Permanent Disability Combined Values Chart

Larger Value

Table with 50 rows and 50 columns representing disability ratings. The table is a grid where the intersection of a 'Larger Value' row and a 'Smaller Value' column contains the combined value. The values range from 01 to 75.

- 1. Use to combine two or more AMA Impairments or two or more Modified California Permanent Disabilities.
2. When combining groups of three or more values, always combine the larger two first, and then successively combine the result with the next smaller value until all values are combined.
3. Combine any two values by locating the larger value on the left side of the chart and the smaller value on the bottom of the chart. The intersection of that row and column contains the combined value.

Smaller Value
